SHORT COURSE

This, presented by Prof. Mark Swilling, will entail an understanding of four dimensions of this endeavour: (a) the way South African economic history has been understood from a political economy perspective; (b) the dynamics of post-1994 economic policy making and why the challenge of radical economic restructuring has not been adequately addressed; (c) the challenge of state capture from the perspective of the literature on neo-patrimonialism; and (d) potential alternatives, including industrial policy, radical green economy developments, 'radical economic transformation' and Fanonist perspectives on resistance and change.

At the end of the course, participants will be able to:

- understand the way different economic paradigms have shaped the way South Africa's economy is understood, including economic policy making;
- be able to apply the concepts they have learnt to analyse the economic challenges South Africa faces, in particular the need for inclusive structural transformation;
- be able to engage in the debates about economic policy alternatives to the current focus on capital intensive infrastructure investments via State Owned Enterprises.

When attending this short course at the Sustainability Institute, the entire space is part of the learning experience. Come and learn in an environment that is engaging and mindful, where discussions can be enjoyed with a diversity of people, creativity be renewed through immersion, where we learn with nature in mind and ensure just futures are sustained through generative thinking.

CERTIFICATE

Attendees who satisfy the minimum performance requirements i.e. attendance of the full 6-day course, full participation and contribution to class and group projects, will be awarded a Certificate of Attendance from USB-ED.

THIS COURSE IS IDEAL FOR

Postgraduate students and practitioners seeking to learn more about the perils and possibilities of planning for inclusive and shared economic growth and development.
