SHORT COURSE

The course delves into the differential dynamics of worldwide urbanisation, with particular reference to the global South. It demonstrates that these large scale shifts in human movement, economic development and expansion of the built environment hold deeply troubling implications for sustainability.

This course is presented by Mark Swilling, a Distinguished Professor of Sustainable Development in the School of Public Leadership, University of Stellenbosch and Academic Director of the Master's Programme in Sustainable Development that is delivered at the SI.

The challenge of designing, building and operating more sustainable urban infrastructure systems is a particular focus of the course, and participants will be introduced to some of the key concepts and trends in the vibrant and fast expanding literature on contemporary urban challenges, including how to make cities more sustainable. This will be done by focussing in particular on urban infrastructures, and the flow of resources through urban systems understood through the lens of urban metabolism. This provides the foundation for dealing with the politics and governance challenges around creating sustainable cities.

When attending this short course at the Sustainability Institute, the entire space is part of the learning experience. Come and learn in an environment that is engaging and mindful, where discussions can be enjoyed with a diversity of people, creativity be renewed through immersion, where we learn with nature in mind and ensure just futures are sustained through generative thinking.

CERTIFICATE

Attendees who satisfy the minimum performance requirements i.e. attendance of the full 6-day course, full participation and contribution to class and group projects, will be awarded a Certificate of Attendance from USB-ED.

THIS COURSE IS IDEAL FOR

Postgraduate students and professionals working as urban planners, architects, city and town planners, municipal managers and policy makers interested in understanding and creating sustainable cities.
